

Alicona Distributors Meeting

Alicona Imaging organized its worldwide bi-annual distributor meeting in March. Sales partners from all over the world travelled to Alicona's headquarters in Graz, Austria, for the intensive meeting.

Emphasis was placed on the latest innovations of the Alicona product range including MeX, software that turns any SEM into a 3D measurement device, InfiniteFocus, for 3D measurements of specimen even at steep slopes, strong roughness or largely surface reflection properties, and TeX, a software solution allowing the capture of images from an optical microscope for 2D feature and dimensional analysis. The meeting reflected the strong market position of Alicona Imaging. Globally, leading companies have successfully applied Alicona products and services in quality assurance as well as in research and development.
